

## Bank Checker Solution

Modulus checking (validating donors' bank account number and sort code details) is an essential part of processing paperless direct debits. Even if you are receiving donations through paper-based direct debits, it is still recommended that you carry out modulus checking in order to avoid possible bank charges and lost revenue.

Our "Bank Checker" solution has been designed to allow you to effortlessly carry out modulus checking both in real-time and batch mode from within **The Raiser's Edge®**.

### Solution Features

- ◆ Real-time validation for bank account number, sort code and branch details.
- ◆ Batch validation of sort code and account number details.
- ◆ Remote installation of Bank Checker plug-in in your live **Raiser's Edge** database.
- ◆ Internet based demonstration on how to use the Bank Checker plug-in.

### Solution Advantages and Benefits

- ◆ Alerts you to any discrepancies in bank details as they are being entered, eliminating any bank charges associated with submission of incorrect details.
- ◆ Helps to ensure you will receive your promised gift, therefore increases your revenue.
- ◆ Eliminates lengthy process of manual checking, giving you more time to better focus on your organisation's mission and goals.
- ◆ Peace of mind knowing that a system expert will be installing the plug-in and demonstrating how to use it.
